PROFESSIONAL SUMMARY

Healthcare Data Analyst with hands-on experience building Power BI, Tableau, Excel, and SQL dashboards and analysis, supported by a clinical background as a Registered Mental Health Nurse across CAMHS, acute mental health, rehabilitation, and crisis services. Skilled in data modelling, dashboard development, KPI reporting, and data storytelling, developed through a structured healthcare analytics programme and applied to live project work. Brings a working understanding of clinical governance, safeguarding, and GDPR-aware data handling that most analysts without a clinical background do not have. Seeking a Healthcare Data Analyst, Data Analyst, or Business Intelligence Analyst role.

CORE SKILLS

Healthcare Data Analysis | Dashboard Development | KPI Reporting | Data Cleaning and Validation | Data Visualisation | Data Storytelling | GDPR and Data Governance Awareness | Clinical Governance and Audits | Risk Assessment and Safeguarding | Multidisciplinary Team Collaboration

TECHNICAL SKILLS

Power BI (DAX, Power Query, data modelling) | SQL (PostgreSQL) | Microsoft Excel (pivot tables, calculated fields) | Tableau (calculated fields, dashboard design) | Git and GitHub | HTML5, CSS3, JavaScript | Microsoft Office Suite

PROFESSIONAL EXPERIENCE

Healthcare Data Analyst Consultant (Internship, Part-time) | Amdari

Remote, United Kingdom | April 2026 to Present

- Built a Power BI KPI dashboard consolidating multiple reports into a single view, reducing reporting turnaround time by approximately 45%.
- Designed and optimised SQL queries across operational datasets to support faster, more reliable data retrieval for reporting.
- Used Tableau to analyse operational datasets, supporting more targeted decision-making and an estimated 30% improvement in conversion of identified opportunities.
- Automated recurring reporting using SQL and Power BI, cutting manual reporting effort by roughly 50% and enabling more consistent, near real-time data availability.
- Cleaned and validated large datasets (1 million+ records), improving data accuracy by approximately 95% and strengthening the reliability of downstream reporting.
- Supported predictive analysis to flag early risk and disengagement patterns, contributing to more timely intervention.
- Collaborated with clinical, finance, and marketing stakeholders to translate business questions into dashboards and reports.

Staff Nurse, CAMHS Inpatient Services | Kestrel Ward, NHS Wales

Abergele, North Wales | June 2025 to Present

- Maintain accurate clinical documentation to support clinical audit and governance processes in a Child and Adolescent Mental Health inpatient setting.
- Translate clinical observations into care metrics used in multidisciplinary team performance reviews.
- Participate in clinical governance activities including audits, incident reporting, and quality improvement initiatives.

Support Worker | United Response

Darlington | April 2024 to May 2025

- Delivered personalised care to individuals with complex needs, maintaining accurate care records to support continuity and review.

Healthcare Assistant, Psychiatric Intensive Care Unit | The Priory Group

Darlington | June 2024 to January 2025

- Supported patients in acute psychiatric crises, applying de-escalation techniques and therapeutic communication to manage risk.

Healthcare Assistant | Medacs Healthcare

Darlington | June 2024 to January 2025

- Assisted healthcare professionals with treatment preparation and observations while maintaining accurate clinical records.

PROJECTS

Global HIV Treatment Effectiveness Analysis | Power BI

[View case study](#)

- Built a 25-year, 150-country Power BI analysis of WHO HIV data using a star schema model (1 fact table, 3 dimension tables) and 10 DAX measures.
- Identified 7 countries combining high infection burden with low ART coverage, informing a treatment-priority recommendation.

DORI Skin Cancer Risk Intelligence | SQL, PostgreSQL

[View case study](#)

- Analysed 1,088 patient and lesion records across two related PostgreSQL tables, using joins, CASE grouping and conditional aggregation to examine factors associated with malignant diagnoses.
- Tested identifier uniqueness before analysis and found 1,088 lesion records but only 1,007 distinct lesion_id values, so used patient_id as the join key throughout.

VitalLink Telehealth Alert Response Dashboard | Tableau

[View case study](#)

- Built a two-page Tableau dashboard on 10,500 telehealth alerts, using a star schema and calculated fields to track clinician response against a 2-hour target.
- Found that 80.2% of alerts, and 45.8% of Critical alerts, missed the target across all four hubs and all 12 clinicians, suggesting a process-level cause rather than individual performance.

Hospital Patient Dashboard | Excel

[View case study](#)

- Cleaned and modelled 400 hospital patient records in Excel, building pivot tables and an interactive, slicer-driven dashboard.

Personal Portfolio Website | HTML5, CSS3, JavaScript

[View site](#)

- Designed and built a fully responsive portfolio site from scratch, no frameworks, with an emphasis on accessibility and SEO.

EDUCATION

HealthTech Data Analytics Programme: 10Alytics, 2025 to September 2026

MSc Nursing (Mental Health): Teesside University, 2023 to 2025

BSc Human Physiology: Delta State University, 2013 to 2017

CERTIFICATIONS

Registered Mental Health Nurse, Nursing and Midwifery Council (NMC) | Member, Royal College of Nursing | Basic Life Support (BLS) | Fire Safety Training | Safety Intervention Training | Safeguarding and Child Protection | Clinical Risk Assessment | Mandatory NHS Training
